PUMA VTS series

PUMA VTS1214 / 1620

Large Vertical Turning Center with RAM Head Spindle

Doosan Machine Tools

Optimal Solutions for the Future

PUMA VTS series
PUMA VTS1214 / 1620

With its large capacity and heavy duty machining capability,
The PUMA VTS series provides excellent productivity for large workpieces

Features

1 Robust Structure

The PUMA VTS series provides optimum durability by including box guideway construction to all linear axes. The large diameter cross taper roller bearing used in the spindle construction provides high rigidity and accuracy for heavy duty machining applications

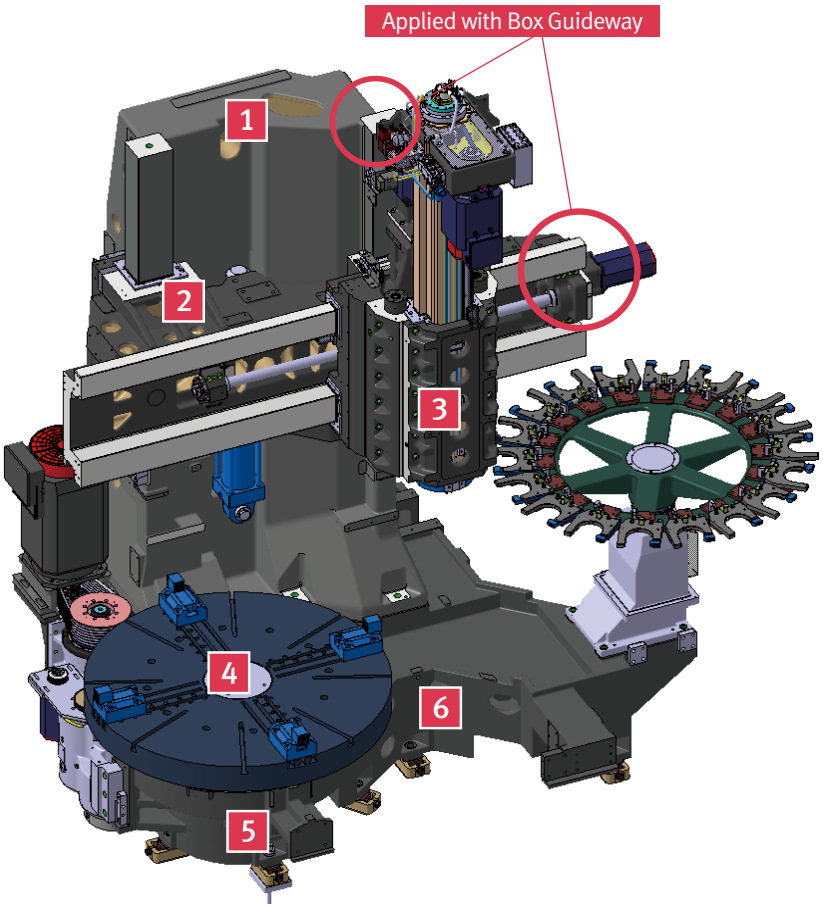
Robust Mechanical Construction

PUMA VTS1620 series

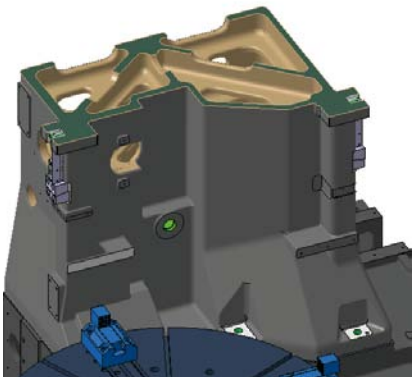
The PUMA VTS1620M series provides extended durability and stable accuracy by implementing a large diameter cross roller bearing for the spindle and box guideways for the linear axes.

Machine Construction



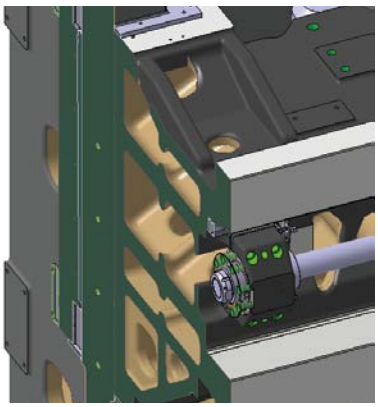
Model : PUMA VTS1620 Core Machine

1



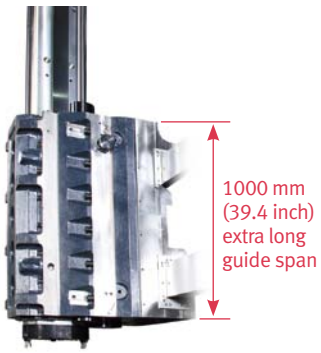
A highly rigid X-type cast Meehanite column structure reduces deflection and ensures optimum cutting performance.

2



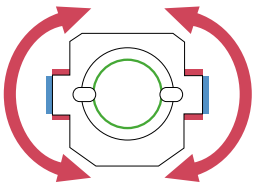
Deflection is avoided by the high rigidity crossrail and ram carriage construction.

3



Large square cross-section

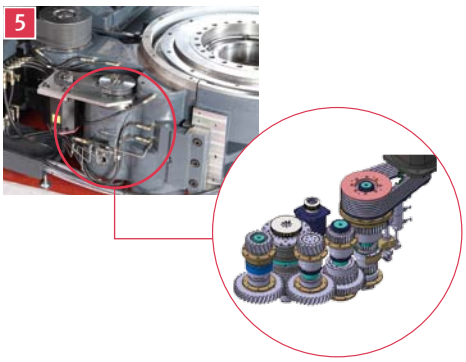
308 × 250 mm
(12.1 × 9.8 inch)



Wide ram guide for high torque

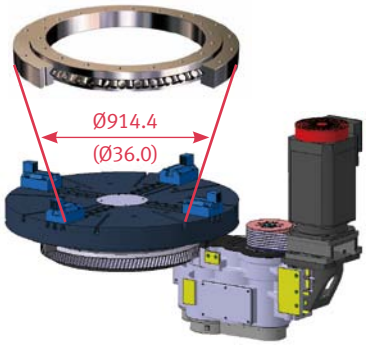
Ram deformation minimized by enlarged guideway design enabling heavy duty cutting.

5



Applied with powerful helical gears to guarantee a long life. The VTS1620M is applied with a zero backlash system to realize accurate C axis control.

4



Designed with large diameter cross taper roller bearing featuring high rigidity in both radial and axial directions. The gears are capable of transmitting high cutting forces.

6

Designed in a base structure that provides a stable cutting performance to the table and carriage, using an X rib structure Meehanite casting.

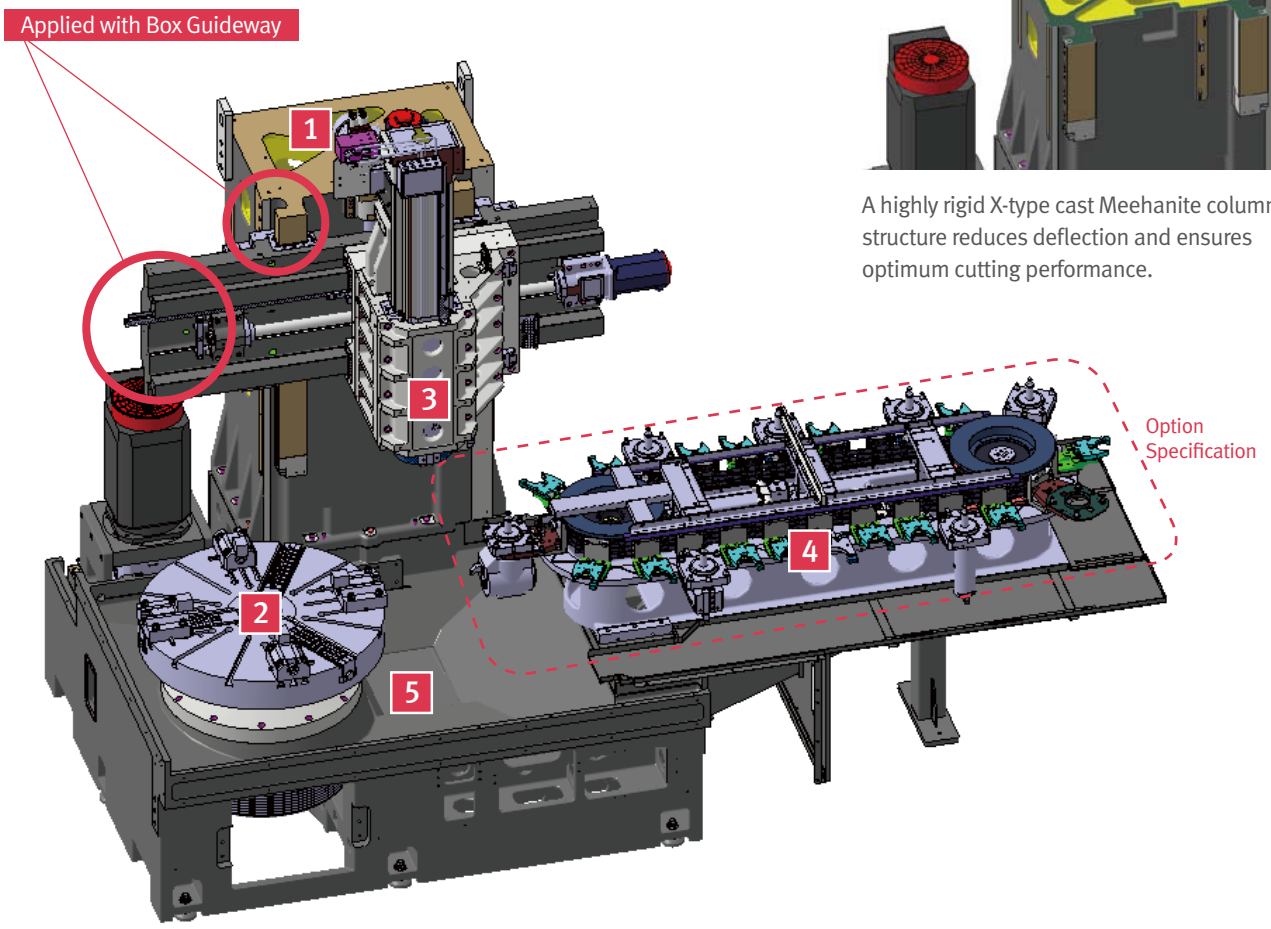
Robust Mechanical Construction

PUMA VTS1214 series

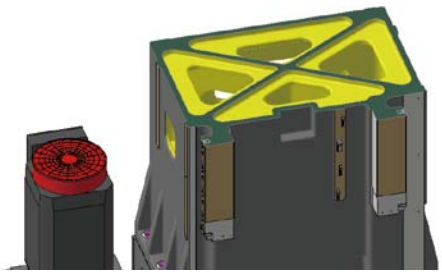
The PUMA VTS1214 series has minimized heat and vibration emissions using a separable-type gearbox, and it exhibits a high rigidity in heavy duty cutting using large bearings.

Machine Construction

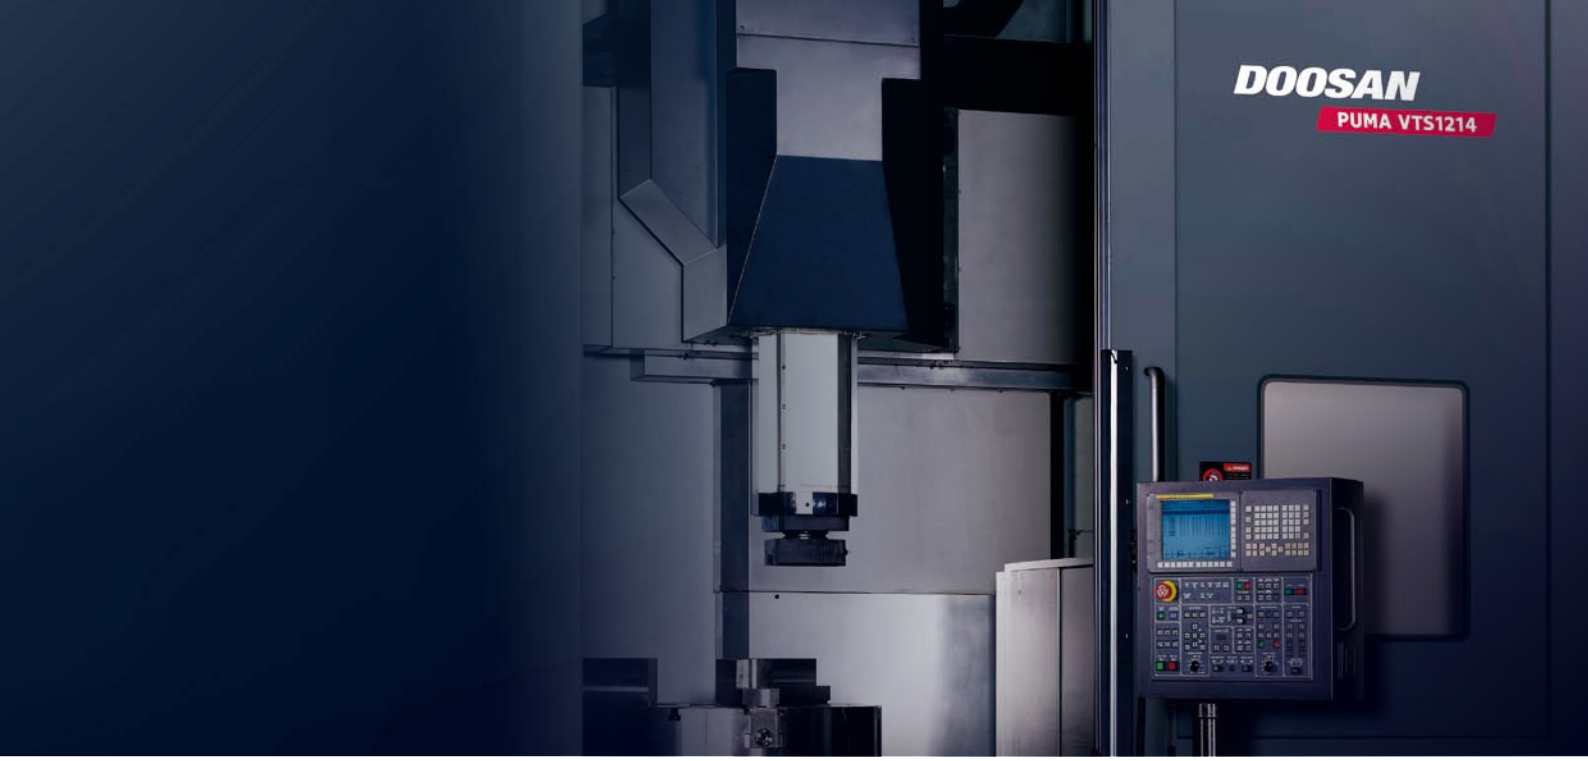


Model : PUMA VTS1214 Core Machine

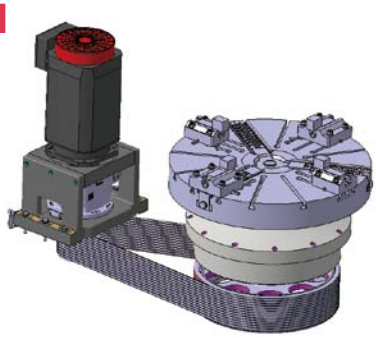
1



A highly rigid X-type cast Meehanite column structure reduces deflection and ensures optimum cutting performance.

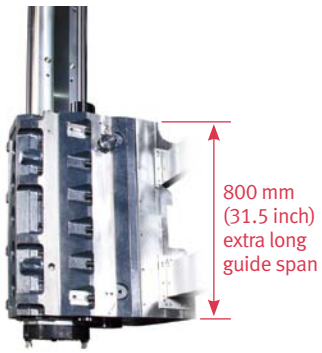


2



Vibration and heat generation at the spindle are minimized with a belt-driven, detachable gearbox. Cutting capacity and safety are enhanced with large diameter bearings.

3



Ram deformation is minimized with an enlarged guideway.
A wide ram guide enables heavy duty cutting.

Large square cross-section

308 × 250 mm

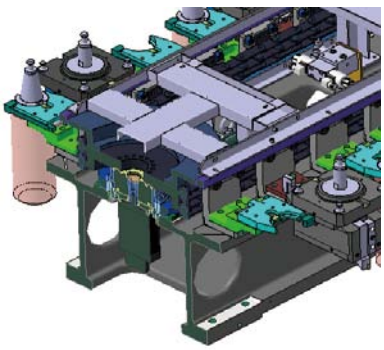
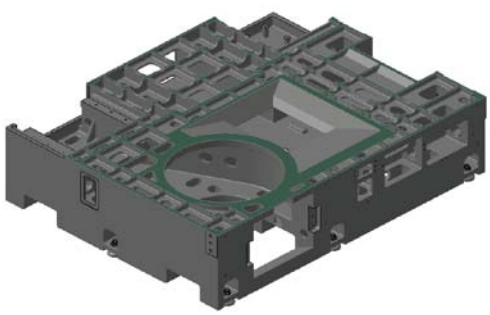
4



24 tool magazines are reinforced with a rigid rib structure for maximum stability. opt.

5



The column and spindle are rigidly supported using a grid-type, rib structure Meehanite cast. Chips can be easily discharged through the sloped top surface.
